

**ABOUT COMPANY** The company Manyz.kg was founded in February 4, 2015 and today one of the leading companies producing and exporting environmentally friendly natural walnuts and honey products in the South region of Kyrgyzstan. In 1996 the first bee-keeping was created by our founder but the company started main honey packaging activities in 2015, over the years we been exporting honey to China and Russia. Our goal is to providing world's population with useful products for human health. Since Kyrgyzstan has the largest forest for mountain wild walnuts we have brought the most modern equipment for walnut processing and packaging. The company Manyz.kg has the best equipment and strict quality technology control. Over the course of several years, our company, with a confident pace, is winning more and more consumers and opening up more and more international markets.

**Walnut**  
*Jugans regia* is an Old World walnut tree species native to the region of Central Asia mainly Kyrgyzstan. The largest forest is in Kyrgyzstan, where trees occur in extensive, nearly pure, walnut forests at 1,000–2,000 m (3000 to 7000 ft) altitude—notably at Arslanbob in Jalal-Abad Province. It is widely cultivated across Europe.

**Sainfoin Honey**  
 According to the consumers of European countries, among the variety of honeys, the most tasty and useful is sainfoin honey. Harvested from one plant i.e. sainfoin seed – a perennial crop. This type of honey is rich in vitamins and carotene. It contains a large amount of ascorbic acid, protein, various enzymes, carbohydrates and other nutrients. It improves blood circulation and strengthens the capillary vessels. In folk medicine, sainfoin's honey known as a tonic, a vitamin agent, it is used in various gynecological diseases, strengthens capillary vessels, as well as a means of enhancing "men" force. Esparcet honey has also diuretic and diaphoretic properties, also in our company on special equipment we can process it to the state of cream

**Multi-Flower Honey**  
 Harvested from wild mountain plants – rare herbs and flowers – from high-altitude region of Kyrgyzstan. It is considered the most ecological honey type. Since it is polyflour honey it has a complex floral taste. Mountain honey is helpful for stress, disorders of the endocrine system, cardiovascular diseases, is effective in the treatment of diseases of the kidneys, liver, stomach. It helps excrete the salt, toxins from human body. Useful in atherosclerosis as well as a sedative in nervous diseases, honey is used at elevated thyroid function. The high content of carotene and vitamin A, confer mountain honey with very strong healing properties.

**Buckwheat Honey**  
 A lot has been said about the benefits of buckwheat honey. This honey kills bacteria, so it is successfully used as a preservative in case of pharmacological cold and flu. Its benefit is proved for the ulcer. for prevention and treatment, you can take a glass of water on empty stomach, and after fifteen minutes eat a dessert spoonful of buckwheat honey. This useful recipe will help restore the mucous membrane of the stomach. Buckwheat honey is imported from the Russia, since buckwheat is not grown on the territory of our republic
